Foot-operated pneumatic interlock

Productivity | Operation

Series

MCH

Control

FANUC | uni-Pro 90 | SIEMENS Solutionline | SIEMENS Powerline

The pneumatic setting station interlock makes operation more convenient and prevents costly consequences of wear.

Characteristics

_ Setting station with roller bearings unlocked by pressing the foot switch (manual rotation 4 x 90°), interlocked by releasing the foot switch

_ Interconnection of a pneumatic valve with manual locking

Benefits

_ More convenience: setting station locked via foot operation

_ Lower costs: less wear and lower follow-up costs with more cushioned, pneumatic locking

Requirements

_ Manually rotating setting station
