Magazine operating panel

Productivity | Operation

Series

MCH | MCH-C | MCi | HF | H

Control

SIEMENS Powerline | SIEMENS Solutionline | SINUMERIK ONE

Tool loading station operator panel for your HELLER machining centres.

Characteristics

_ Via the operating panel at the tool setting station all operations required for tool loading can be performed.

_ This includes: Menu-driven tool setting (loading and unloading of tools), Input of all tool data, Detailed display of the entire magazine area including tools inside the magazine, Auxiliary functions for support in case of errors.

_ The screen view of the main operator panel is transferred to the operator unit at the tool loading position. This prevents simultaneous operation from the main operator panel and the panel at the tool loading position.

_ On series H Gen 1 und Gen 4 sowie HF the operating panel is designed as a 24" touch screen.

_ Because LEUKHARDT has discontinued the tool loading station operator panel previously used on HELLER MCi and MCH machining centres, we are now offering a terminal as a successor model.

Benefits

_ More reliability: universal spare part availability by replacing the discontinued LEUKHARDT magazine control panel.

Requirements

_ Series MCi / MCH: SIEMENS Powerline

_ Series H: SIEMENS Solutionline und Kettenmagazin 54/80/160

_ Series HF: SIEMENS Solutionline udn Kettenmagazin 54/80
