Control

SIEMENS Solutionline

Generate a DMC from a Code in the NC program. A sequence of numbers or letters from the NC program is translated into a DataMatrixCode and stored in a subprogram. By calling the subprogram, the code is applied to the workpiece with a suitable engraving tool.

Characteristics

- _ Code
- _ can be freely composed of numbers and letters. The
- _ composed subprogram can be easily integrated in the NC program. Cycle
- _ time depends on the number of points of the code (number depends on type and
- _ length).

Benefits

- _ Integration
- _ in the machine center
- _ No
- _ further transport of the workpiece and no costs for an extra DMC
- _ station
