Machine documentation: The scope of HELLER machine documentation includes operating instructions, maintenance manual, spare and wear parts lists, circuit diagrams and media diagrams. The complete machine documentation is available digitally (e.g. CD-ROM with PDF format, fluid and circuit diagrams in a suitable format). All documents will be delivered after consultation in the requested language and in English. The terminology used and the high informative value of the graphic representations facilitate the information and instruction of the owners and users of the HELLER machine for safe and proper handling of the machine. Labelling: The complete labelling of all relevant parts (media wall, operator door, machining unit, ...) will be delivered after consultation in the requested language as well as English. Screen language: For a country-specific screen language, the corresponding language package will be installed after a technical check.

Benefits

_ Country-specific language adjustment of the machine documentation, labelling and screen language makes it easier for customers to work with the HELLER machine
