Automatic filling device for coolant unit

Productivity | Process Reliability, Automation

Series

H F C HF

Control

SIEMENS Solutionline

With the automatic filling device for coolant unit on your HELLER machine, you avoid costs and reduce sources of error.

Characteristics

_ A 2/2 directional control valve monitored by a float switch is provided for automatic filling of the coolant unit with the ready-to-use coolant mixture provided by the customer.

Benefits

_ No dry running of the coolant systemOverfilling of the tank can be eliminated (possible with manual filling)._Time-consuming re-filling of the cooling lubricant is no longer necessary.Sources of error, such as late or incorrect filling, are avoided.The process is automated

_ The temperature of the cooling lubricant remains more stable due to regular refilling.
