HELLER Services Interface Global (HSI-global)

Availability | Digitalization

Series

C | F | H | HF

Control

SIEMENS Solutionline | SIEMENS Powerline | SINUMERIK ONE

Transparency in production and maintenance. The HELLER Services Interface Global is a web-based application for visualising the available data based on the HELLER4Industry functionalities present.

Characteristics

_ Production: Visualization of productivity data, program runtimes, tool and process data. Statistics for a quick overview. Maintenance: Identification of preventive and predictive measures by displaying the condition of axes, spindles and other assemblies. Retrofit effort subject to technical inspection

Benefits

_ Cross-site analysis for several machines simultaneously at a minimum effort
_ Using HSI all over the world
_ Servicing possible without an on-site visit
_ Several machines can be viewed simultaneously
_ “Production view” included in the standard scope of supply
_ Cross-site data analysis is possible
_ Display of data directly on the machine control (the displayed data depends on the selected H4I options of the respective machines)
_ Long-term data storage and archiving in the cloud

Requirements

_ Depending on the existing machine configuration, HSI-global requires the Remote Diagnostics HELLER4Industry functionality, if necessary with HELLER CONNECT BOX.
