Transparency in production and maintenance. The HELLER Services Interface Global is a web-based application for visualising the available data based on the HELLER4Industry functionalities present.

## **Characteristics**

- Production: Visualization of productivity data, program runtimes, tool and process data. Statistics for a quick overview. Maintenance: Identification of preventive and predictive measures by displaying the condition of axes, spindles and other assemblies. One time product
- \_ Retrofit effort subject to technical inspection

## **Benefits**

- Cross-site analysis for several machines simultaneously at a minimum effort
- Using HSI all over the world
- \_ Servicing possible without an on-site visit
- \_ Several machines can be viewed simultaneously
- "Production view" included in the standard scope of supply
- \_ Cross-site data analysis is possible
- Display of data directly on the machine control (the displayed data depends on the selected H4I options of the respective machines)
- \_ Long-term data storage and archiving in the cloud

## Requirements

- \_ Depending on the existing machine configuration, the HELLER4Industry functionality Remote Diagnostics (RD) or alternatively the Advanced Data Box are required.
- \_ RD (Remote Diagnostics): for online and offline fault diagnosis.
- \_ Advanced Data Box: IPC for data storage and preparation
