You receive with the LifeGuard Package coordinated HELLER4Industry functionalities to ensure maximum machine availability.

Characteristics

- _ The LifeGuard package includes the following HELLER4Industry functionalities:
- _ RD [Remote Diagnostics]: online fault diagnosis as well as secure data transfer and notification services.
- _ AC [Axes Condition]: monitoring axis wear during the traversing movement of the main axes.
- _ SC [Spindle Condition]: monitoring the processes and states of the main spindle.
- _ HELLER Services Interface Global: web-based application for visualising of production and maintenance data from the machine.
- _ Condition Plus Global: additional assembly-related views in the HELLER Services Interface to support the analysis of maintenance-relevant data. Online Data analysis services incl. the creation of quarterly reports by the HELLER specialist.

Benefits

- _ Worldwide fault analysis and rectification at any location, from any location
- _ Early detection of quality-related changes
- _ Reduction of consequential damages and costs
- _ Scheduled maintenance and reduction of unscheduled downtimes by monitoring axis wear during the traversing movement of the main axes and determining the maximum acceleration and dynamic overload during the process
- _ Clear presentation of your HELLER machinery and its condition
- _ Key production and maintenance parameters available at your fingertips
- _ Provision of process data to ensure manufacturing quality
- _ Assembly-related views of maintenance-relevant data
- _ Reporting including manufacturer know-how and HELLER expert knowledge
